Cocoa – a driver for change

Leif Pedersen, Sr. Commodities Adviser

Why cocoa?

- Pro-poor, pro-environment development strategy
- Agro-commodity sectors struggle with
 - Poverty
 - Social conditions and lack of opportunity
 - Environmental degradation
 - Biodiversity loss
 - Climate change risk
- Create future for farmers' children

Enormous potential for change

Farm in Ghana
Approx. 350 kg/ha

Farm in Peru
Approx. 3500 kg/ha

Cocoa sustainability – progress and shortcomings

- Everyone is doing something
- ...but most do it alone. Some are absent
- Huge gaps, overlaps
- Change more expensive and slower than it needs to be

The inclusive way

Every stakeholder has a role to play
...but no stakeholder can create change alone

Collective action for change

- National Commodity Platforms
- Consensus through dialogue
- Focus on root causes
- Commitment to joint action
- Enabling environment for change

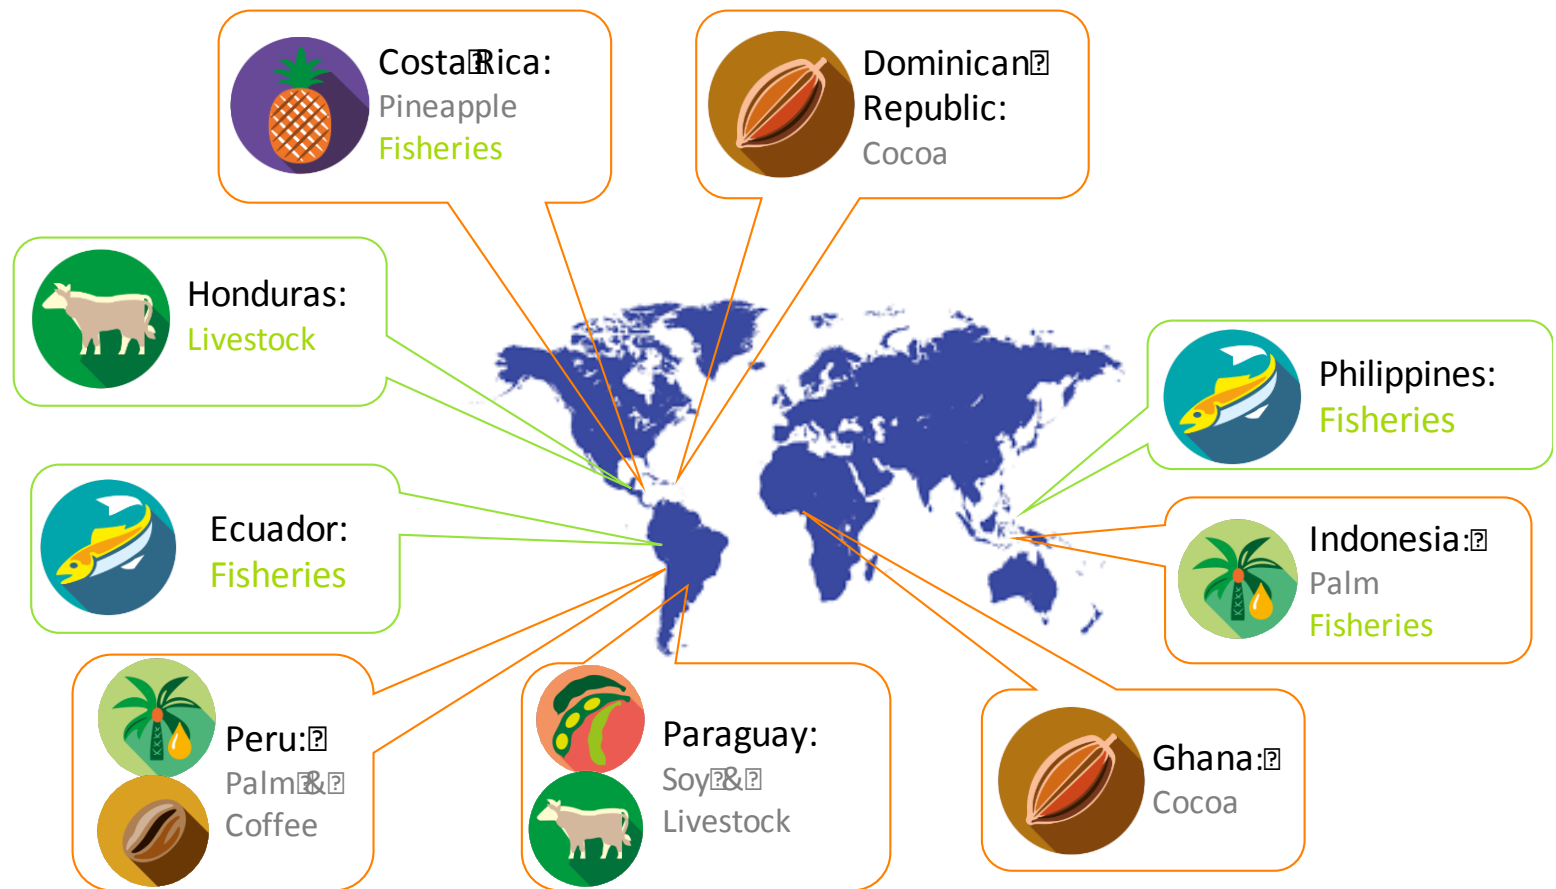

Collective action for change

- National Action Plans
- Collective vision for the future
- Road map to guide investments and activities

National Commodity Platforms
